ICANN – Myth and Reality

U.S. Chamber of Commerce Washington, DC 20 June, 2000

Andrew McLaughlin Chief Policy Officer and CFO

ICANN: The Secret Truth Revealed!!!

Key Questions:

- What exactly is this "ICANN"?
 - A sinister, shadowy cybergovernment dedicated to bringing on the New World Order through control of the Internet?
 - The world's first open, transparent and globally representative conspiracy?
- A.K.A.: Is it true that I travel via Black Helicopter?

ICANN: The Basic Idea

ICANN =An Experiment in **Technical Self-Management** by the global Internet community

ICANN: The Basic Bargain

ICANN =

Internationalization of Policy Functions for DNS and IP Addressing systems

Private Sector on-governmental) Manageme

+

(non-governmental) Management

What does ICANN do?

Coordinates policies relating to the unique assignment of:

- Internet domain names
- Numerical IP Address
- Protocol Port and Parameter Numbers

Coordinates the DNS Root Server System

- through Root Server System Advisory Committee

Says The Economist:

- "ICANN is in many ways a completely new institutional animal."
- "It is a hybrid between an online community and a real-world governance structure, an untested combination."
- "It is also a new type of international organisation: an industry trying to regulate part of itself, across the globe, with little or no input from national governments."

(10 June 2000)

Domain names & IP addresses

- Domain names are the familiar, easy-to-remember names for computers on the Internet
 - e.g., amazon.com, tiesweb.org, ge.co.uk
- Domain names correlate to Internet Protocol numbers (IP numbers) (e.g., 98.37.241.130) that serve as routing addresses on the Internet
- The domain name system (DNS) translates domain names into IP numbers needed for routing packets of information over the Internet

Categories of Internet Domains

- Generic Top Level Domains (gTLDs)
 - .com, .net. .org, .gov, .mil, .edu, .int, .arpa
 - .com, .net. .org open for registration by all persons and entities on a global basis
 - Proposals to add many more gTLDs (.shop, .arts, .union, etc.)
- Country Code Top Level Domains (ccTLDs)
 - .uk, .fr, .us, .mx, .ca, .de, etc.
 - Registration requirements vary by domain (many require domicile within the territory or other connection with the territory)
 - Derived from ISO 3166-1 list

Status Quo Ante ICANN

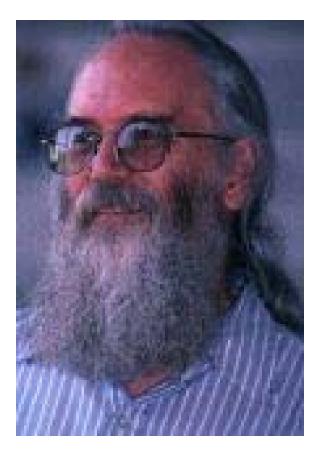

Most Internet DNS and IP Address coordination functions performed by, or on behalf of, the US government:

- Defense Advanced Research Projects Agency (DARPA)
 - Information Sciences Institute (ISI) of University of Southern California
 - Stanford Research Institute (SRI)
- National Science Foundation (NSF)
 - IBM, MCI, and Merit
 - AT&T, General Atomics, Network Solutions, Inc. (NSI)
- National Aeronautics and Space Administration (NASA)
- US Department of Energy

IANA

- "Internet Assigned Numbers Authority"
- A set of technical management functions (root management; IP address bloc allocations) previously performed by the Information Sciences Institute (ISI) at the University of Southern California, under a contract with DARPA
- Includes protocol parameter and port number assignment functions defined by the Internet Engineering Task Force (IETF)
- Now a part of ICANN

Jon Postel 1943-1998

Need for Change

- Globalization of Internet
- <u>Commercialization</u> of Internet
- Need for <u>accountability</u>
- Need for more <u>formalized management</u> structure
- Dissatisfaction with <u>lack of competition</u>
- Trademark/domain name <u>conflicts</u>

White Paper Principles

White Paper: new policy/management structure must promote 4 goals:

- Stability
- Competition
- Private, bottom-up coordination
- Representation

White Paper Implementation

- Internet community to form non-profit corporation meeting White Paper's 4 criteria
- US Government (through Commerce Department) to transition centralized coordination functions
- Amendment of Network Solutions agreement to require competitive registrars in gTLD registries
- Request to WIPO to study & recommend solutions for trademark/domain-name conflicts

Status of Transition from USG

- ✓ 25 November, 1998 ICANN recognized in MoU
- June, 1999 Cooperative agreement among ICANN, US Government, root server operators
- ✓ 10 November, 1999
 - ICANN and Network Solutions sign gTLD registry and registrar agreements
 - DoC transfers root authority over gTLDs to ICANN
- ✓ 9 February, 2000
 - Contract with US Government to complete transfer of IANA functions

Policy Objectives for Year 2000

- New Top-Level Domains
- At Large Membership Elections
- ccTLD registry agreements
- IP Address registry agreements
- Root server operator agreements
- September 30, 2000 Target date for ICANN to settle all registry + registrar + root server relationships

Domain Name Issues

Uniform Dispute Resolution Policy

- Optional, non-binding alternative to court
- Average time to resolution: 35-40 days
- Targets abusive, bad-faith cybersquatting
- Applies to .com, .net, and .org (not ccTLDs)
- Four providers: National Arbitration Forum, Disputes.org/e-Resolutions; WIPO; CPR

Competition in registration services

- Pre-ICANN: Monopoly provider (NSI) for .com, .net, .org; minimum cost of US \$70
- Now: Over 45 competitors worldwide (+ resellers); prices start at US \$10

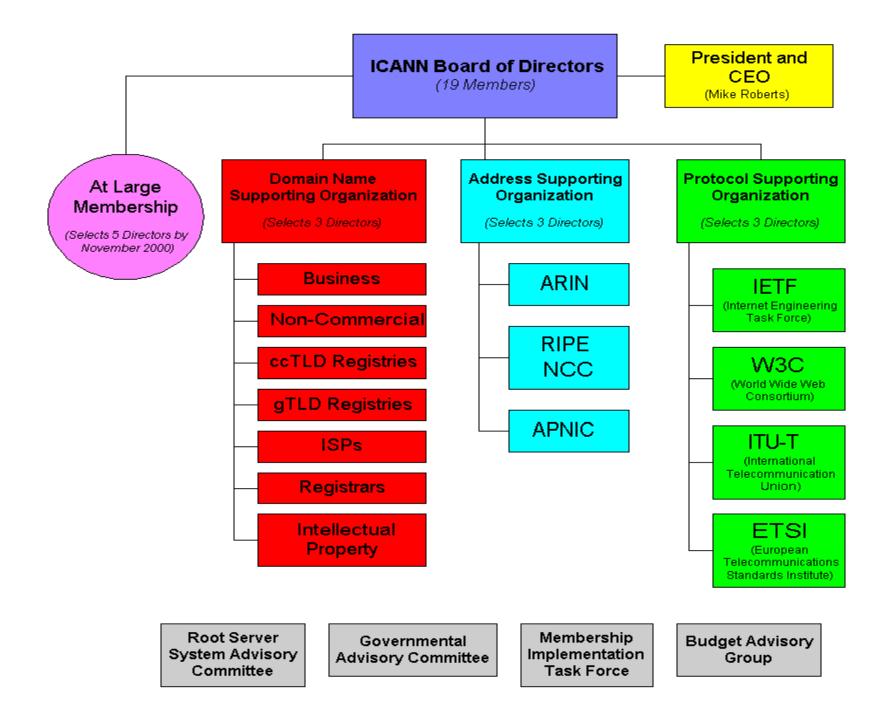

New Top-Level Domains

ICANN Board to make decision on how to proceed in July; staff proposals posted

• Internationalization of DNS character sets

- Problem for technical standards bodies (i.e., IETF), not ICANN
- Need for open standard & interoperability with existing DNS

Structure of ICANN

ICANN Board of Directors

At Large Directors:

- Esther Dyson (USA) Chairman
- Geraldine Capdeboscq (France)
- George Conrades (USA)
- Greg Crew (Australia)
- Frank Fitzsimmons (USA)
- Hans Kraaijenbrink (Netherlands)
- Jun Murai (Japan)
- Eugenio Triana (Spain)
- Linda S. Wilson (USA)

ASO Directors:

- Blokzijl (Netherlands)
- Fockler (Canada)
- Wong (Hong Kong, China)
 DNSO Directors:
- Abril i Abril (Spain)
- Cohen (Canada)
- Pisanty (Mexico)

PSO Directors:

- Abramatic (France)
- Cerf (USA)
- Davidson (U. K.)

ICANN Staff

New Model: Lightweight (minimal staff = minimal bureaucracy)

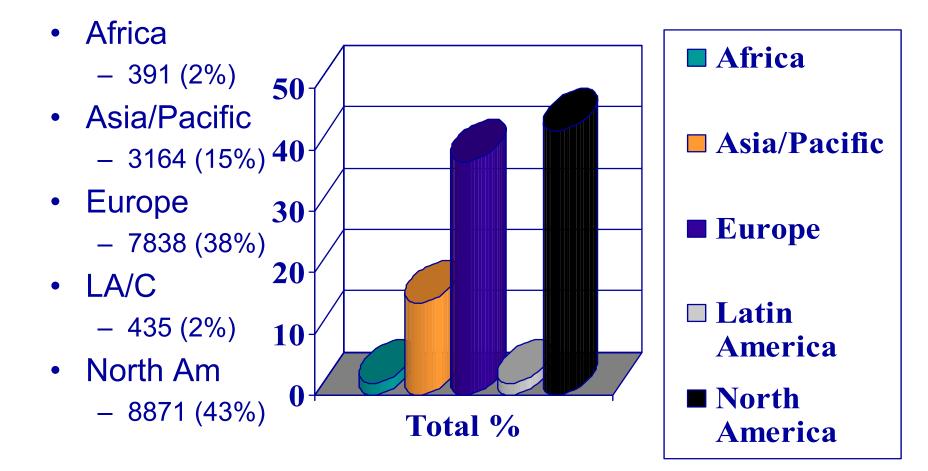

Current Staff:

- President and CEO (Mike Roberts)
- Vice President/General Counsel (Louis Touton)
- Chief Policy Officer/CFO (Andrew McLaughlin)
- Registrar Liaison (Dan Halloran)
- IANA staff (Joyce Reynolds, Michelle Schipper, Suzanne Woolf)
- Network Administrator (Jim Villaruz)

At Large Membership

- Open to any individual with verifiable name, email address, physical address
- Free to join and to vote
- Members will directly elect 5 ICANN Directors by November 2000 (Election by Region)
- Nominations committee + self-nomination
- 6-month study period to follow first election
- Membership Implementation Task Force
- JOIN! <u>http://members.icann.org</u>

Applications for Membership (~7 June)

Applications for Membership (~7 June)

- 7965 United States
- 4738 Germany
- 1292 Japan
- 906 Canada
- 773 United Kingdom
- 486 South Korea
- 426 France
- 355 Australia
- 296 Austria

- 271 Switzerland
- 208 Thailand
- 205 Netherlands
- 201 India
- 157 Ireland
- 156 Italy
- 134 Spain
- 117 New Zealand
- 116 Argentina
- 107 Mexico

Why Elect Directors?

- Accountability
- Transparency
- Representation
 - Geographic
 - Sectoral
- Diversity of views
- Distributed architecture of selection
- BUT: ICANN needs high-quality directors, a goal which may be in tension with representation

ICANN = Cybergovernment?

A: NO!

- ICANN has no inherent coercive power, only the ability to enter into contractual relationships through a process of consensus & consent
- ICANN is not a substitute for the powers of governments (i.e., courts and laws)

Does ICANN regulate?

- No: ICANN <u>coordinates</u>.
- **But**: technical coordination of unique values sometimes requires accounting for non-technical policy interests:
 - Data privacy protection
 - (WHOIS database)
 - Intellectual property/trademark law
 - (UDRP)
 - Competition law
 - (Registrar accreditation for .com, .net, .org)

What ICANN doesn't do

- Network security
- Spam
- Web Sites' Data Privacy Practices
- Internet Content
 - Pornography
 - Hate speech
 - Copyright violations
 - Deceptive business practices / consumer protection
- Multi-jurisdictional commercial disputes
- Definition of technical standards
 - Network surveillance and traceability
- Internet gambling

Lessons from the Experiment?

- Private-sector self-management is possible, if narrowly chartered
- Global consensus on policy is difficult to define; even harder to achieve
 - Consensus is a tradition in the technical community in which ICANN is rooted, because you can test solutions & refer to objective data
 - Consensus on policy questions can be elusive, because it depends upon subjective values

Message to You:

(and to all Internet communities)

GET INVOLVED!!!

Consensus means you have to show up to be heard.
