RE: DANE email implementation request

Dear Mr. Viktor Dukhovni,

Thank you for your communication of 15 March 2018. This response serves as receipt confirmation of your email correspondence. Your letter has been posted to the ICANN Correspondence page here: <https://www.icann.org/en/system/files/correspondence/dukhovni-to-icann-15mar18-en.pdf>.

ICANN has worked hard on implementing and utilizing many different technologies that improve the security posture of email over the last many years. From early adopters of using PGP with email to investing in CA based certificates for use with TLS transport and S/MIME--which is now currently used extensively in ICANN. We are quite interested in testing a DANE for SMTP TLS implementation however we don't have the resources to take on such a project now. I have discussed this effort with my colleague Paul Hoffman and we agreed to collaborate on a test bed project by early FY19. We will reach out via email in the coming months to coordinate.

Sincerely,

A handwritten signature in black ink that reads "D. Closson".

David Closson
Director, Cloud and Data Center Operations
